Read the following forum topic for more information::Q: How to use `lm` on a mixed predictor data? I have a data set that contains several predictor variables with two outcome variables, the first outcome is a continuous variable and the other outcome is a binary variable. I need to use a linear model on this data set to test the effect of each predictor on both outcome variables. How do I use the lm function on this? I am quite confused on this issue as I am a newbie in R. Thanks in advance for your help. A: You can try this: library(plyr) x
