As a number of people here have said, one of the biggest problems with this is that if you can be on-boarded to the US Navy, you can be on-boarded to NASA, and to pretty much every other US government agency. A libertarian would say that this will actually be a bad thing for the general public because once you've been on-boarded into a government agency, it means that agency becomes more powerful. As such, this information has to be carefully looked at to ensure that the privacy rights of the individuals affected by this are not infringed upon (especially if the agency itself is using this information for national security purposes). If this data is going to be used for law enforcement purposes, then privacy legislation will have to be put in place. But when the privacy of the individuals affected will actually be threatened, I think the libertarian case is more persuasive. This is like our Australian Customs and Border Protection Department having access to our internet history, and our passports and visa applications. And that's not a good thing. I agree with the above posts. I don't see why it would be bad for the Government to have access to the data, even if some citizens do not like it. The government is not doing anything out of the ordinary, it's just collecting a dataset which will be useful to the government, and the citizens who want to work for the government. It's not like the government is sending the information over the interweb. The only way I see the issue as bad is if the government uses this data in ways which violates the law, or where the Government allows them to do so. From the public side, the main threat to privacy comes from the Government. If you are worried about your privacy from the Government then you should be in Australia. If it is the Government collecting the data that has the possibility of compromising the privacy of others then that data should be properly stored, have a method of revision and update, have a procedure for obtaining access to it, and that it is not allowed to be shared.Q: Google App Script - Issue with Form App i created a form and a button, if i click the button it redirect to the form page with the proper data the form looks like this the App Script looks like this 82157476af
